Professional Skills

Fishery-independent Sampling: drift and anchored longline (horizontal and vertical to 2000 meters depth), block rigs, drift and anchored gill nets, beach seines, otter trawl, bongo nets, backpack electro-shocking equipment, various fish traps, various hook and line methods

Tagging and telemetry: ultrasonic transmitters with depth sensors, manual tracking receivers, passive monitoring receivers, passive integrated transponders (PIT tags), archival transmitters, PAT (pop-off archiving satellite transmitters), nylon dart tags, M-style dart tags, t-bar tags, internal anchor tags, Roto tags, Peterson discs, harnessing methods, implantation and suture methods. Tagged more than 10,000 sharks and rays, including ~50 endangered smalltooth sawfish.

Taxonomic Methods: experienced in identifying marine fishes and invertebrates (epipelagic, mesopelagic, and nearshore) from tropical and temperate regions. Most experienced in the western Atlantic Ocean (Brazil through United States including Caribbean Sea and Gulf of Mexico) and the central Pacific Ocean (primarily the Hawaiian Islands). Also experienced in identification of North American reptiles, amphibians, and freshwater fishes.

Software: ArcView GIS with Animal Movements and Spatial Analyst Extensions, Excel, Minitab, S-plus, Word, Ecological Methodology, Estimate-S, Irfanview, Photoshop, Acrobat, Windows applications, GIMP, Igor-Pro
